Logout Page	8

#### **Note:**

Access home page using <a href="http://142.3.27.3/home.php">http://142.3.27.3/home.php</a>
Access login page using <a href="http://142.3.27.3/login.php">http://142.3.27.3/login.php</a>

#### EMAIL CONFORMATION SUBSCRIPTION

Here, with this pdf file, I have attached 8 more files with codes on it. Those file names are listed as follows

- 1. database\_connection.php Database connection details
- 2. **home.php** Subscribers entry page
- 3. **activation.php** Email activation message page
- 4. **login.php** simple login page for registered subscribers
- 5. **page.php** display the subscried data from database
- 6. **edit.php** page for editing the subscription
- 7. **update.php** page which updates the changes in database (hidden page)
- 8. **logout.html** simple logout page with message

From the Assignment #2, I used the same codes and designs with more additional changes required for this Assignment #6.

#### **Database Configuration**

In PhpMyAdmin, I created database with a table and its fields as given below

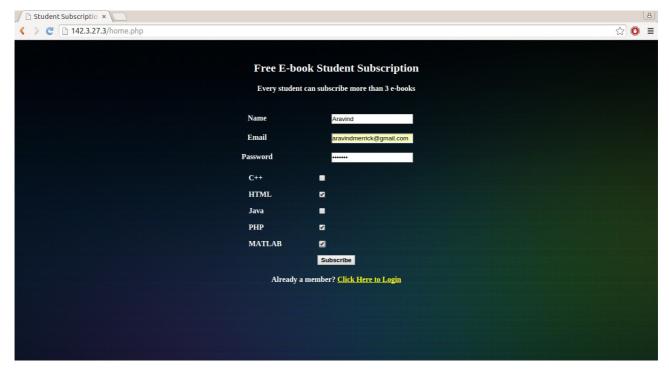

In the database\_connection.php file, I used the database, table and field names. Also there I configured the details of SMTP and Email

#### SMTP as smtp.uregina.ca

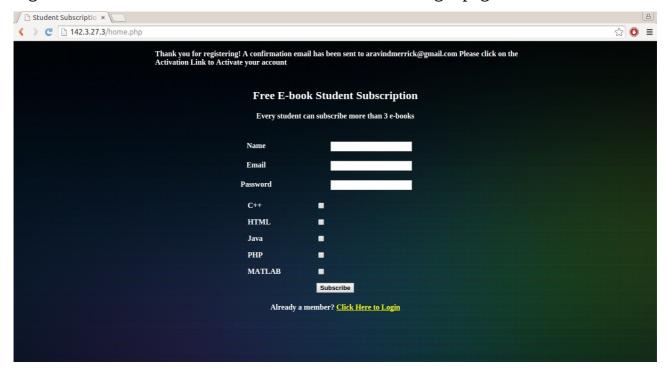

#### Email as <a href="mailto:aravindmerrick@gmail.com">aravindmerrick@gmail.com</a>

SMTP used to send the activation link using the mail id mentioned to the subscriber on clicking the activation link, the subscriber's email have registered into the database The screenshots of all the webpages and the process of how it works are given clearly as follows

#### Home Page – home.php (http://142.3.27.3/home.php)

after entering the data and click susbcribe it send an activation mail to the particular email that subscriber mentioned in the Email column. If he/she is an already registered user, there is a link which takes them to the login page.

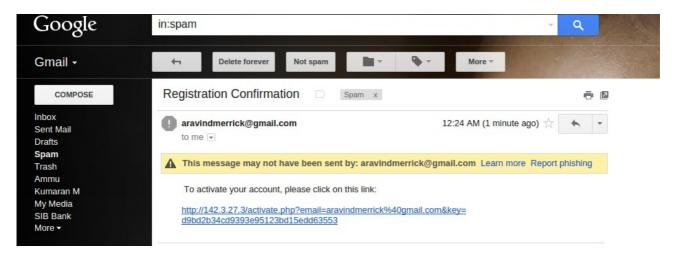

It display a message after clicking subscribe button as "Thanks for registering, and An activation email has been sent" like that.

#### **DB** before Activation

under the Activation field it generates random key with the combination of alphanumeric character

#### **Email Activation Link**

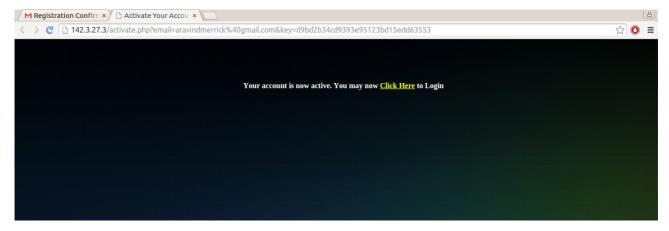

#### **DB** after Activation

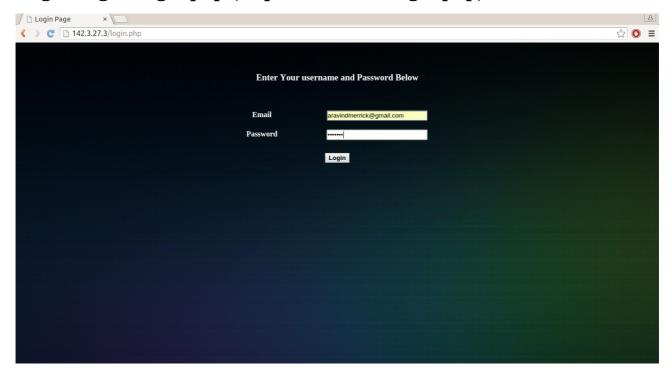

once the activation link is clicked by the subscriber, in the database, in Activation field the random key alpha-numeric combination has changed to NULL.

#### **Activation Page - activation.php**

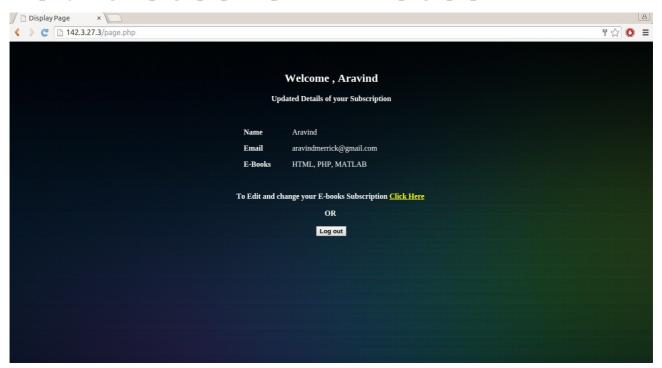

On clicking activation link on email, it takes to the activation page says the message whether email is activated or not

#### Login Page – login.php (http://142.3.27.3/login.php)

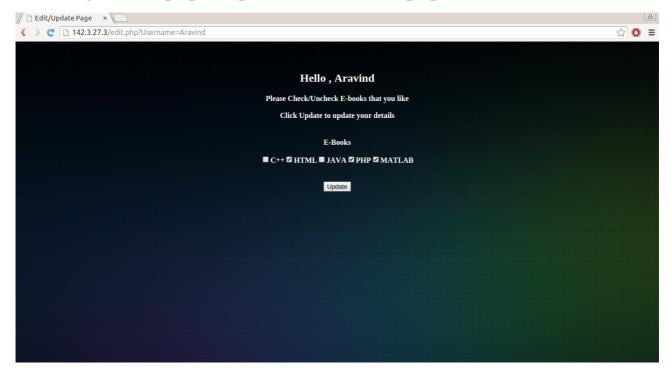

once the email is activated, the subscriber can be able to login using his/her email id and password and while clicking login button it takes to the page.php

#### Display Page – page.php (http://142.3.27.3/page.php)

here in this page it welcome the subscriber and displays name, email and subscribed e-books and an option link to edit the subscription or logout button

#### **Edit Page – edit.php (http://142.3.27.3/edit.php)**

this page fetches the data from the database and allows the user to make changes to the subscription and needs to click update button to be updated in the database. As we know from the Activation area, the subscribed books of the user here, I mention is "HTML, PHP, MATLAB" and made changes to "C++, JAVA"

#### **DB** before update

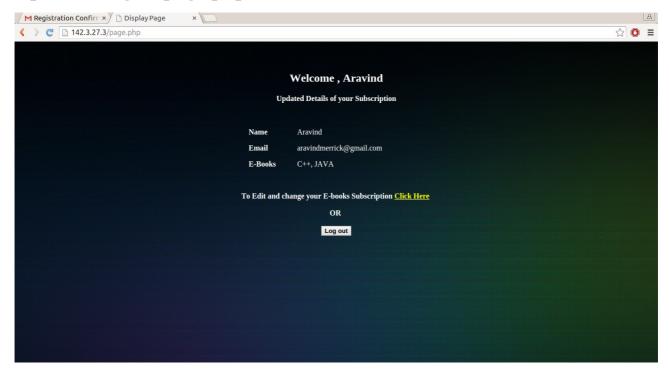

#### **DB** after update

The UPDATE butto on edit.php is connected with the update.php page, which does the update process and make changes in the database and again takes to page.php which shows the result of updated changes

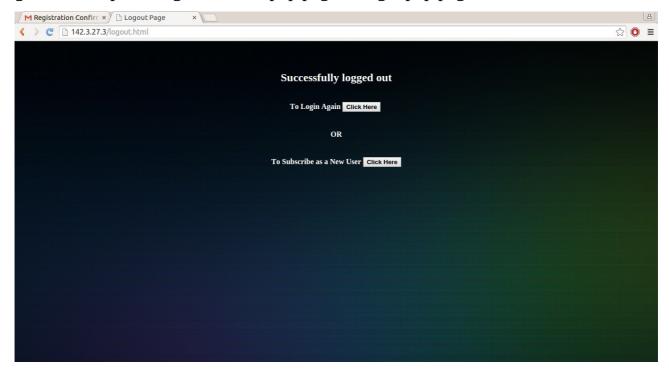

University of Regina – Spring / Summer 2015 – Page No. 7

#### **Updated Page – page.php**

#### Logout Page – logout.html (http://142.3.27.3/logout.html)

This is the simple html page which says the user has successfully logged out and gives them option to go the home.php page or login.php page
